# Default map issue, no listings show on map

Posted by Huggins - 2011/10/01 16:36

---

Hi Sam. please assist. We recently bought Moxie maps to add the map flavor to our mosets directory listing. The map display well as required on the listing detail, however we can't display the listings on the map on the categories and the listing summary. What we want to achieve is as follows:

1). On the home page, we need to display only the map area of South Africa, and show  icons on that map corresponding to all the listings. We have used the "Features" Configuration utility of mosets tree to specify the default country (specified as code SA for South Africa). We still get a "World Map" on the home page with no icons shown for listings.

2) We need to maintain say three levels of categories (province,city, town) and be able to display the map area corresponding to the selected category, and eventually display the listings in the listing details. I have seen this is more like how you have it on the Moxie Maps demo page. Currently it only displays the map properly on the listing detail but everywhere else it shows the "world map" with no listing icons.

Please assist a.s.a.p

NB: we are using moxie maps template

Regards

Hi Sam. Kindly provide us feedback on this issue the earliest. We followed all the steps as in the installation guide and we hoped the results to be the same as on the demo system from this basic setup steps. If there is any tweaking that needs to be done, please let us know because we don't know of anywhere where its documented.

Regards

Huggida

Did you change the template of moxie maps?

Do you have listings outside SA?

I had the same problem when I was using my custom marker, no listings were showed. Please check you have no custom markers or only custom markers made like I told you in the other thread.

_____

Hi Guido. Thanks for your response. Here is my response.

We have not changed the moxie map template, however the we are using another joomla template for the site pages themselves i.e rocket theme template for the joomla pages and the moxie map template for the mosets tree. (Is it possible to use only the moxie map template, ie both for joomla and the mosets tree?)

I have tested a few listings outside SA, and i noted that they display the same way as the SA listings.

The issue has been experienced with both custom markers and standard moxie map markers.

Looking forward to your help

Regards

It is really hard for me to say anything about this problem without seeing the website. Do you have a live url?

Huggida, would you mind sharing with me how you were able to add the map to the details page.
